

Evidence checklist

Record enough to explain what happened, without collecting more personal or harmful material than the destination needs.

BARK SCOPE

BARK covers business and platform conduct. For personal or image-based abuse use eSafety; for concerns about a child use ACCCE; for immediate danger call 000.

Start with the outcome

What would you like to happen: removal, a refund or remedy, a privacy response, account recovery, or an official assessment?

YOUR COPY

Puppy vs Algorithms does not receive, investigate or submit your report. Review everything before sharing it with an official external service.

1. Identify the incident

☐ URL, account, platform or business

☐ Exact words, claim, action or design step

☐ Previous complaint date and reference

☐ Date, time and Australian time zone

☐ Order, payment or subscription details

☐ Response - or lack of response

2. Record the facts once

OBSERVATION

What did you directly see, hear or experience?

CONTEXT

Where and when did it happen?

IMPACT

What practical effect did it have?

ACTION

What have you already tried?

OUTCOME

What would you like to happen?

3. Before you submit

Check the first step.

Some pathways require the business, platform or provider to be contacted first.

Check the destination.

Is it for an individual remedy, regulator intelligence, content removal or a police report?

Check every attachment.

Remove unrelated personal information and submit only what the destination requests.

You do not need to prove why the design exists. Record what appeared, what you tried, what happened next, and the outcome you want.
